			<p>Section note from chapter 27 to 40</p> <p>1. The fundamental principle is that if a substantial transformation of a molecule has occurred, then the origin of the product is the country where the transformation took place.</p> <p>2. The main method for determining origin should be the rule of Change in Tariff Classification. If "Change in Tariff Classification" is not feasible, the alternative approaches shall be applied in sequence as follows:</p> <ul style="list-style-type: none"> (a) chemical reaction; (b) mixtures and blends; (c) purification; (d) change in particle size; (e) standards materials; (f) isomer separation.

				<p>3. The alternative approaches referred to in paragraph 2 shall be interpreted as follows:</p> <p>(a) Chemical reaction: A "chemical reaction" is a process (including a biochemical process) which results in a molecule with a new structure by breaking intramolecular bonds and by forming new intramolecular bonds, or by altering the spatial arrangement of the molecule. The following are not considered to be chemical reactions for the purposes of determining whether a product is an originating good: (i) dissolving in water or other solvents; (ii) the elimination of solvents including solvent water; or (iii) the addition or elimination of water of crystallization.</p> <p>(b) Mixtures and blends: For purposes of chapters 30 and 31, heading 33.02, subheading 3502.20, headings 35.06 through 35.07 and heading 37.07, the deliberate and proportionally controlled mixing or blending (including dispersing) of materials to conform to predetermined specifications which results in the production of a good having physical or chemical characteristics which are relevant to the purposes or uses of the good and are different from the input materials is considered to be origin conferring.</p> <p>(c) Purification: For purposes of chapters 28 through 35 and chapter 38, purification is considered to be origin conferring provided that one of the following criteria is satisfied: (i) purification of a good resulting in the elimination of 80 per cent of the content of existing impurities; or (ii) the reduction or elimination of impurities resulting in a good suitable for one or more of the following applications: i) pharmaceutical, medicinal, cosmetic, veterinary, or food grade substances; ii) chemical products and reagents for analytical, diagnostic or laboratory uses; iii) elements and components for use in micro-elements; iv) specialised optical uses; v) non toxic uses for health and safety; vi) biotechnical use; vii) carriers used in a separation process; or viii) nuclear grade uses.</p> <p>(d) Change in particle size: The deliberate and controlled modification in particle size of a good, other than by merely crushing or pressing, resulting in a good having a defined particle size, defined particle size distribution or defined surface area, which are relevant to the purposes of the resulting good and have different physical or chemical characteristics from the input materials is considered to be origin conferring.</p> <p>(e) Standards materials: Standards materials (including standard solutions) are preparations suitable for analytical, calibrating or referencing uses having precise degrees of purity or proportions which are certified by the manufacturer. The production of standard materials is to be considered as origin conferring.</p> <p>(f) Isomer Separation: The isolation or separation of isomers from a mixture of isomers is to be considered origin conferring.</p>
