**PRODUCT-SPECIFIC RULES**

## ANNEX II

### REFERRED TO IN ARTICLE 3.4

### PRODUCT-SPECIFIC RULES

#### SECTION I

#### INTRODUCTORY NOTES

1. The first column of the list contains chapters, headings or sub-headings of the Harmonized System (HS) and the second column sets out a description of the products. For each entry in the first two columns, one or two rules are specified in columns 3 and 4. If the HS code in column 1 is preceded by an 'ex', this means that the rules in column 3 or 4 apply only to that part of the chapter, heading or sub-heading mentioned in column 2. Where, for an entry in the first two columns, a rule is specified in both columns 3 and 4, either rule may be applied. If no origin rule is given in column 4, the rule set out in column 3 shall be applied.

2. For the purposes of the product specific rules set out in this Annex:

- (a) "VNM%" denotes the maximum percentage of the value of non-originating materials allowed in relation to the ex-works price of the product. For example, "VNM 60%" indicates that the VNM does not exceed 60 percent of the ex-works price of the product;
- (b) "CC" denotes a change to the chapter, heading or subheading from any other chapter. This indicates that all non-originating materials used in the production of the product have undergone a change in tariff classification at the two-digit level (i.e. a change in chapter) of the HS;
- (c) "CTH" denotes a change to the chapter, heading or subheading from any other heading. This indicates that all non-originating materials used in the production of the product have undergone a change in tariff classification at the four-digit level (i.e. a change in heading) of the HS;
- (d) "CTSH" denotes a change to the chapter, heading or subheading from any other subheading. This indicates that all non-originating materials used in the production of the product have undergone a change in tariff classification at the six-digit level (i.e. a change in subheading) of the HS; and
- (e) "WO" indicates that the product is wholly obtained in a Party as defined in Article 3.3 of the Agreement;

3. This Annex is formulated on the basis of the Harmonized System as updated as Version 2012.

## SECTION II

### NOTE REFERRING TO CHAPTERS 27 TO 40

1. The fundamental principle is that if a substantial transformation of a molecule has occurred, then the origin of the product is the country where the transformation took place.
2. For the purpose of this note, a product shall be considered as wholly obtained, thereby considered as originating in a Party if:
  - (a) products of Chapter 30 are obtained by using cell cultures;
  - (b) products falling within Chapters 27 to 40 are obtained by fermentation.
3. The approaches referred to in paragraph 2 shall be interpreted as follows:
  - (a) "Cell culture" is defined as the cultivation of human cells, animal cells and plant cells under controlled conditions (such as defined temperatures, growth medium, gas mixture, ph) outside a living organism.
  - (b) "Fermentation" is a biotechnological process in which bacteria, yeasts, fungi or enzymes are used to produce products falling within Chapters 27 to 40.
4. The main method for determining origin should be the rule of Change in Tariff Classification. If "Change in Tariff Classification" is not feasible, the alternative approaches shall be applied in sequence as follows:
  - (a) chemical reaction;
  - (b) mixtures and blends;
  - (c) purification;
  - (d) change in particle size;
  - (e) standards materials;
  - (f) isomer separation.
5. The alternative approaches referred to in paragraph 4 shall be interpreted as follows:
  - (a) Chemical reaction: A "chemical reaction" is a process (including a biochemical process) which results in a molecule with a new structure by breaking intramolecular bonds and by forming new intramolecular bonds, or by altering the spatial arrangement of the molecule. A chemical reaction may be expressed by a change of the "CAS number". The following are not considered to be chemical reactions for the purposes of determining whether a product is an originating good:
    - (i) dissolving in water or other solvents;
    - (ii) the elimination of solvents including solvent water; or
    - (iii) the addition or elimination of water of crystallization.

- (b) Mixtures and blends: For purposes of chapters 30, 31 and 32, heading 33.02, subheading 3502.20, headings 35.06 through 35.07, heading 37.07 and 3808, the deliberate and proportionally controlled mixing or blending (including dispersing) of materials to conform to predetermined specifications which results in the production of a good having physical or chemical characteristics which are relevant to the purposes or uses of the good and are different from the input materials is considered to be origin conferring.
- (c) Purification: For purposes of chapters 28 through 35 and chapter 38, purification is considered to be origin conferring provided that one of the following criteria is satisfied:
- (i) purification of a good resulting in the elimination of 80 per cent of the content of existing impurities; or
  - (ii) the reduction or elimination of impurities resulting in a good suitable for one or more of the following applications:
    - (aa) pharmaceutical, medicinal, cosmetic, veterinary, or food grade substances;
    - (bb) chemical products and reagents for analytical, diagnostic or laboratory uses;
    - (cc) elements and components for use in micro-elements;
    - (dd) specialised optical uses;
    - (ee) non toxic uses for health and safety;
    - (ff) biotechnical use;
    - (gg) carriers used in a separation process; or
    - (hh) nuclear grade uses.
- (d) Change in particle size: For the purposes of Chapters 30, 31 and 32, the deliberate and controlled modification in particle size of a good, other than by merely crushing or pressing, resulting in a good having a defined particle size, defined particle size distribution or defined surface area, which are relevant to the purposes of the resulting good and have different physical or chemical characteristics from the input materials is considered to be origin conferring.
- (e) Standards materials: For the purposes of Chapters 28 through 32, Chapter 35 and Chapter 38, the production of standards materials is considered to be origin conferring. Standards materials (including standard solutions) are preparations suitable for analytical, calibrating or referencing uses having precise degrees of purity or proportions which are certified by the manufacturer. The production of standard materials is to be considered as origin conferring.
- (f) Isomer Separation: For the purposes of Chapters 28 through 32 and Chapter 35, the isolation or separation of isomers from a mixture of isomers is to be considered origin conferring.
